MobileMonitor

Monitor all cell phone text messages & emails and view it from your existing interface.

Mobile Monitor is now available for BlackBerry and Android Smartphones

Just install the software onto the phone you want to monitor by sending it a text message and you will then be able to see all sent & received text messages and emails from that phone though your online interface.

Mobile Monitor captures all employee smartphone communications. Just log into your online account and see a full record of all the text messages and emails - who they communicated with and both sides of the conversation. Through one interface you can now montior all employee communications wheather it be from a computer, laptop or smartphone.

Mobile Monitor lets you monitor all text messages and emails so you know exactly what information is leaving your organization.

You can also set email alerts that will automatically send you an email notification any time certain keywords that you've set as important are used by the employees you're monitoring.

Common Questions

Q: How do I install the software?

Answer:
It's simple. Simply send a text message to the phone you want to monitor and click the link in the message. Within a few seconds, the software will be installed and it will immediately begin recording all text messages and emails that are sent and received.

Q: How do I see what's been monitored?

Answer:
Log int the Mobile Monitor interface to view all recorded data. You can access it from anywhere - including another mobile phone.

Q: Is the software visible to the employees or detectable by the employees?

Answer:
No. Mobile Monitor has taken years to develop and it's totally undetectable. The software runs totally silently and invisibly. There are no icons or visible programs anywhere.
